EDUCATION

- UX & Web Design Master Course: Strategy, Design, Development. 2022
- JavaScript Algorithms and Data Structures.
2019-2020 Free Code Camp
- Technology Program- Software Developer.
Udemy

SOME PERSONAL PROJECTS

- Calculator

- Responsive menu

- Animated button

COMPUTER LANGUAGES, SOFTWARE , TOOLS & OPERATING SYSTEMS

JavaScript, HTML5, CSS3, Angular, React, Vue, Laravel, PHP Node.js, MySQL, Adobe XD, jQuery, Materialize, Bootstrap, Git, Jira, Postman, RESTful APIs, Unit Test, PostgreSQL, Redux
Adobe XD, Docker, Figma

LANGUAGES

Spanish (Native), English (Fluent), Slovenia(Fluent),
Dutch(Learning)

WORK EXPERIENCE

Junior Frontend developer

2020-2022

- B2

- As a full-time frontend developer at a marketing company, I focused on building visually appealing, responsive applications with high design standards. My daily tasks included using jQuery, CSS, and Angular (SPA) to extract data from backend APIs, developing algorithms, and optimizing performance to ensure an exceptional user experience.

Software developer

2022-2022-8

- Metronik

- I developed full-stack applications using Angular for the frontend and C# for the backend, focusing on design patterns, algorithms, data structures, clean code practices, testing, and RESTful APIs.
- I created dynamic graphs, tables, climate applications, and other user-friendly solutions for companies like Krka (pharmaceuticals), Telekom, and Electroenergetica. I also implemented a CLI file manager using Streams API, similar to GIT Bash, and provided ongoing support for Swagger projects.
- In addition, I added new features to existing projects, including modifying MySQL database tables, developing metro line calculation logic, and creating routers, seeders, factories, and entity validations, ensuring the integrity of field names in database queries.
 -
- One of my work in this company.

Front-end Developer

2022-2023-1

- Glossiq

- I work as a frontend Engineer in one of the most successful start-up companies in the region. Working with react.js, html,css and scss.
- Implemented single-page application (SPA) with components, react-router, forms, API, hooks, redux
- Tested app with React Testing Library
- My daily task was to receive the designs of the UI/UX designers and implement it in my application. Resolve bug issues and optimize the application
- One of my work in this company.

Software Engineer

2023-4

- CREA

- I work as a Software Engineer with a tool called (Ultimus bpm) that internally uses a programming language called U# a language akin to Angular.
- My daily tasks included modifying user interfaces, extracting data via APIs (Swagger), developing databases with PostgreSQL, and seamlessly integrating the information into applications with advanced automation to deliver an exceptional user experience.

Software Engineer

2023-2024

- Maneks Plus

- I craft seamless user experiences by refining interfaces, integrating APIs (Swagger), and building efficient MySQL databases. Leveraging my expertise in Laravel, I optimize local development workflows for faster and more effective project delivery.
- Specializing in technologies such as Laravel, PHP, MySQL, XAMPP, Bootstrap, and SCSS. My primary focus has been on creating robust and efficient web applications using the Laravel framework and Vue.js.
